***Election/Restrictions***

1. Applicant's election with traverse of Group III in the reply filed on 1-6-06 is acknowledged. The traversal is on the ground(s) that hot pressing would form a closed pore body. This is not found persuasive because the process may be used to make a materially different product such as a closed pore body rather than the open pore body of Group III. Also the process claims do not require the composition as set forth in claims 8 and 9.

The requirement is still deemed proper and is therefore made FINAL.

***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claim 9 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 9, the terms "the mixture", "the grain size" lack antecedent basis. Also in the claims the terminology "applying it" and "sintering it" it is not clear what is "it". The metes and bounds of the claim cannot be determined in view of the terminology "usual manner" and what is encompassed by the terminology therefore the claim is considered indefinite.

***Allowable Subject Matter***

4. Claim 8 is allowed.

5. Claim 9 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.

6. Berger et al (2004/0228927 and 2004/0175430) are cited of interest however fails to teach beta-tricalcium phosphate. Ogawa et al (2004/0087429) and Gonda et al (2005/0079226) are cited of interest for teaching a glass sintering aid for calcium phosphates however fail to teach the specific compositions of the claims.
